

SOCIAL ECONOMIC BURDEN AND HEALTH-RELATED QUALITY OF LIFE IN PATIENTS WITH RARE DISEASES IN EUROPE

Aim

To generate a model to quantify the socio-economic costs and Health Related Quality of Life (HRQOL), of both patients and caregivers, in different European countries.

Target groups

- * Rare Disease (RD) patients
- * RD patient Caregivers
- * RD patient associations
- * National and EU Health Authorities.

The collaboration of patient associations and groups is fundamental to the success of the BURQOL-RD project, and hence to the benefits that it will provide to patients and caregivers.

Strategic relevance and EU added value

- * Design future policies on RD for EU citizens.
- * Compare the availability and access to health resources for specific RD in each country.
- * Explore the relationships between HRQL and access to healthcare resources.
